

Project Design Phase

Problem – Solution Fit Template

Date	30 September 2026
Team ID	91002338
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

1. CUSTOMER SEGMENT(S) - ServiceNow administrators and data owners - Department users who work with records on a shared table	2. CUSTOMER CONSTRAINTS - Limited admin time - Must use platform features only, with no extra plugins - Existing access must not break	3. AVAILABLE SOLUTIONS - Role-only ACLs (too broad) - Separate table per group of records - Data policies and query business rules
4. JOBS-TO-BE-DONE / PROBLEMS - Decide who can read, create, edit and delete each record based on a field value - Prove that the rules work for every role	5. PROBLEM ROOT CAUSE - Role checks do not look at values inside a record unless a script is used - Rules are not applied the same way for all four operations	6. BEHAVIOUR - Tests in the instance by impersonating users - Adjusts the script and tests again

7. TRIGGERS • Audit finding about exposed records • Sensitive records added to a shared table • A user reports seeing records they should not	8. YOUR SOLUTION • A script-controlled ACL for Read, Create, Write and Delete that allows access only when the user's role and the record's field value both match • Verified by impersonation for each role	9. CHANNELS OF BEHAVIOUR • Online: ServiceNow documentation and community answers, the instance itself • Offline: talks with the security team and managers, access matrix reviewed in meetings
EMOTIONS: BEFORE → AFTER • Before: worried and exposed to a data leak, unsure the rules work • After: confident and in control, ready for audit
