

Ideation Phase

Define the Problem Statements

Date	30 September 2026
Team ID	91002338
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am	Describe customer with 3-4 key characteristics - <i>who are they?</i>	Describe the customer and their attributes here
I'm trying to	List their outcome or "job" the core about - <i>what are they trying to achieve?</i>	List the thing they are trying to achieve here
but	Describe what problems or barriers stand in the way - <i>what bothers them most?</i>	Describe the problems or barriers that get in the way here
because	Enter the "root cause" of why the problem or barrier exists - <i>what needs to be solved?</i>	Describe the reason the problems or barriers exist
which makes me feel	Describe the emotions from the customer's point of view - <i>how does it impact them emotionally?</i>	Describe the emotions the result from experiencing the problems or barriers

Problem Statements for Our Project:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	a ServiceNow administrator who owns a table of sensitive records	restrict who can see a record based on the value of a field in that record	role-based ACLs open every record on the table to anyone who holds the role	standard ACL role checks do not evaluate individual record values unless a script is used	worried and exposed to a data leak
PS-2	a department user who works with records on a shared table	view and update only the records that belong to my scope	I either see records I should not, or I am blocked from records I need	access rules are not applied consistently across Read, Create, Write and Delete	frustrated and confused
PS-3	a project team member building the ACLs	write and verify scripted ACLs for all four operations	it is hard to confirm each rule behaves correctly for every role	ACL scripts must be tested user by user, and a wrong script fails silently	anxious and unsure the solution is safe to release
