

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	30 September 2026
Team ID	91002338
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Problem statement selected: PS-1

"As a ServiceNow administrator, I want to restrict who can see a record based on the value of a field, but role-based ACLs open every record on the table to anyone with the role."

Team gathering and collaboration:

Team member	Role	Contribution
Arvindeshkiran Senthilkumar	Team Lead	ACL – Create
Madhan S	Member	Project outcome and conclusion
Pandian M	Member	ACL – Write and ACL – Delete
Dharmesh R	Member	Users and roles creation
Jayabalakumaran R	Member	Table creation and ACL configuration (Read)

Step-2: Brainstorm, Idea Listing and Grouping

Ideas listed by the team (one idea per note):

Script ACL that returns true only when the record field equals an allowed value	Combine role check with field value: <code>gs.hasRole()</code> and <code>current.field</code>	Role-only ACL for each table (simple, but too broad)
Separate table for each restricted group of records	Query business rule that filters list views by field value	Data policy or field-level ACL for sensitive columns

Impersonate each user and record what they can see	Test matrix: role x operation (Read, Create, Write, Delete)	Log denied access for audit review
--	---	------------------------------------

Grouping of ideas:

Group	Ideas
Scripted ACL (chosen direction)	Script ACL on field value; role check combined with field value
Other platform features	Role-only ACL; separate tables; query business rule; data policy / field-level ACL
Testing and validation	Impersonate each user; role x operation test matrix
Governance	Log denied access for audit review

Step-3: Idea Prioritization

Ideas scored on Impact and Effort (1 = low, 5 = high). Priority favours high impact and low effort.

Idea	Impact	Effort	Priority	Decision
Script ACL: role check plus field value	5	3	1	Do first
Role x operation test matrix and impersonation	4	2	2	Do first
Log denied access for audit review	3	2	3	Do next
Query business rule to filter lists	3	3	4	Later
Data policy / field-level ACL	2	3	5	Later

Outcome: the team will implement a script-controlled ACL for Read, Create, Write and Delete, and validate it with the test matrix.
